EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 21: A method for processing financial instruments on a system of digital computers and related storage devices, networks and peripherals, said method comprising

(a) providing a plurality of financial event templates recorded in at least one storage device read by at least one said computer, each financial event template comprising at least one component, and defining, for each variable within said at least one component that points to another component, a processor-independent inter face to said other component;

(b) providing a representation of each said instrument~ recorded in at least one storage device read by at least one said computer, said representation comprising a static representation of said instrument and an event representation thereof, -constructed by performing on said at least one computer steps comprising selecting financial events from said plurality of financial event templates;

(c) providing at least one processing object recorded in at least one storage device read by at least one said computer said processing object comprising procedures defining the processing to be performed for a plurality of event types; and

(d) reading the event representation of at least one financial instrument by at least one computer and at least one processing object from at least one storage device and performing said processing by executing on at least one said computer upon the events of said event representation those of said procedures defined in said at least one processing object that correspond to the financial events of said event representation and wherein said static representation is specified independently from said at least one object.

Claim 23: the method of claim 22, further comprising

(a) providing an event extraction processing object recorded in at least one storage device read by at least one said computer:

(b) providing a set of instrument parameters for said instrument recorded in at least one storage device read by at least one computer; and

(c) executing on at least one said computer, upon said set of instrument parameters, procedures defined in said event extraction procession object thereby generating said event representation and wherein said event extraction procession object is specified independently of the specification of said static representation.

2. The following is an examiner's statement of reasons for allowance:

The rejection of claims 21-23 and 25-31 under 35 U.S.C. 103(a) was based on Benaroch et al. in view of Moore et al. The Examiner noted that Benaroch et al. failed to disclose a key limitation of claim 21, whereby the instrument's representation "is specified independently from said at least one processing object." The Examiner relied on Moore et al. with respect to this feature. However, the feature of "separation" of the "stored processing rules" of Moore et al., and its respective "applications" falls short of the requirement the "objects/rules" which must be

specified independently from, i.e., specified without knowledge of, the application. The present specification states that the "independently" limitation means that "financial instruments are modeled independently of their valuation methodologies."

Also, Moore et al. does not meet the "specified independently" limitation of claim 21. In this regard, setting up the "stored processing rules" of Moore et al. requires that the user must repeatedly specify "object data required to support rule execution, behavior rule monitoring, exposure and risk calculations, reporting and query."

Claims 22-23 and 25-29 depend from claim 21 and incorporate each and every one of its limitations. Claims 22-23 and 25-29 are therefore patentable if, as argued above, claim 21 is patentable (see MPEP 2143.o3). Moreover, claims 23, 26 and 28 are patentable for the further reason that they each recite that the same "processor independent" framework as in claim 21 is applied when the "processing" involved is the generation of the intermediate "event" representation of the instrument by an "event extraction" processing object. I.e., the same processing features as recited in claim 21 (including the "specified independently" feature) are used (in accordance with any of claims 23, 26 and 28) to generate the "event representation" of the instrument that is acted upon in claim 21. Applicant is unaware of any prior art that teaches such a process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANIEL S. FELTEN whose telephone number is (571)272-6742. The examiner can normally be reached on Flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Dixon can be reached on (571) 272-6803. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
